

# **BUILD A BETTER IMAGE WITH** **FLEXSTIK®**

## **Specialty Thin Tapes for Flexographic Plate Mounting**

Adheso-Graphics' FlexStik® brand offers a variety of thin adhesive tapes, each ideal for the mounting of corrugated printing plates onto various thicknesses: 0.010" to .030" PVC or polyester substrates. Plates are typically flat mounted to these double-coated tapes. Upon application, the liner is removed and the plate is ready for attachment to PVC mounting materials, which carry thick polymer printing plates into a flexo-corrugated printing station.

AGI thin tapes are also suitable for use in plate build-up and press-low spot correction. Typically rubber or acrylic—depending on the level of adhesion required in the final application—the tapes are available with a variety of thicknesses and liner types.

At Adheso-Graphics, our research and development, manufacturing and service operations remain dedicated to meeting your flexographic printing requirements; specifically those for tapes and products that make your print quality better. Our service includes a product offering that continues to expand in conjunction with your needs. Adheso-Graphics remains committed to exceeding the performance standards our industry is known for.
